

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Forklifts are somewhat pricey pieces of equipment since a new electric forklift model could cost starting from eighteen thousand to twenty five thousand, for a 5000lb machinery. Furthermore, a few thousands of dollars would have to be invested in a battery charger and battery. The same internal combustion lift truck of the same lift capacity would cost slightly less and the diesel models that are capable of heavier lifting capacities could cost upwards of one hundred thousand dollars. Reconditioned lift trucks are an alternative to be able to save a large amount of money in view of the fact that they cost less than half the price of brand new units.

Some buyers may be apprehensive about purchasing a used or reconditioned forklift in view of the fact that they feel they will have to spend more on repairs. Nevertheless, a properly reconditioned forklift would be able to work just along with a brand new one. Though your lift would get heavy use, as long as you take good care of the equipment, it will serve all your needs and possibly save you a lot of cash.

It is essential to establish what the seller means by a reconditioned or refurbished forklift when thinking about obtaining a second-hand forklift. Numerous companies do a very good job reconditioning a model previous to selling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To properly and meticulously rebuild a lift truck engine, a good company would totally disassemble it. A heat cleaning system could then be utilized to clean all the parts. When this step has been finished, all of the components are checked to see if they have any defects, any breakage or any extensive wear. Some parts such as cylinder blocks, connecting blocks, cylinder heads and crankshafts are reground, resurfaced and resized if considered necessary. Other components such as gears, nuts, bolts etc. are replaced or repaired as considered necessary.

When the overhaul has been done, the engine is rebuilt by hand. After being reassembled, a series of tests are applied to the working equipment in order to check all of the components and be sure there are no leaks or problems. If any problems occur, the needed changes are made.

There must be no reason to be worried about acquiring a refurbished or reconditioned forklift from quality sellers. The process of rebuilding the equipment ensures the utmost in reliability. Repairs expenses may actually work out to be less for the reason that you would avoid the initial phase of higher maintenance projections that a new lift truck has as it is broken in. By following routine upkeep schedules and taking care of the machine appropriately, a reconditioned forklift will serve you well.
